NOTES

1. Parts, quantities, materials and finishes as the parts list 210101_P01_WALL-PANEL-ASSY-SIDE-LOWER-LH_BOM.csv (its rows under 210101), word for word; each part's own drawing holds its sizes and tolerances.
2. Items marked * (7 108002, 11 838001, 12 838004, 13 838005, 14 848001) are not in the STEP 210101_P01_WALL-PANEL-ASSY-SIDE-LOWER-LH_STEP.step P01: they have no balloon; their places are in their rows and the joints register.
3. Views in first angle (ISO 5456-2); each view title gives its X and Y in pod axes (guideline 3.3). Visible outlines only, as an assembly drawing shows them.
4. Interface sizes (ordinates, true mm from the STEP): the rivnut centres along the panel, from the frame's front end: J-WALL-01's stopped joints and the 2 spigot rivnuts in the top rail, J-WALL-02's in the back stile: 838003 at 100, 220, 570.91, 921.83, 1272.74, 1392.74, 1466.74.
5. Interface sizes (ordinates, true mm from the STEP): the rivnut centres up the panel, from the frame's bottom: 838003 at 220, 559.31, 898.61, 1138.3, 1139.8.
6. Interface sizes (ordinates, true mm from the STEP): the ledge's rivet centres, from the frame's front end: 838012 at 47.74, 317.74, 587.74, 857.74, 1127.74, 1397.74.
7. Fitted at the factory (D-87), as the parts list's rows give it: the rivnuts 838003 set in the frame's Ø10 holes after its welding and touch-up (J-FRAME-01), a stop washer 831002 under each stopped-joint rivnut's head, which sets the 2.26 gap; the 2 spigots 831001 screwed into the top rail's spigot rivnuts with threadlocker (H-05), locating the panel above; the ledge 211701 held on the bottom rail's room face as the drill jig for the rail's Ø3.3 holes, then riveted with 6 closed-end countersunk blind rivets 838012 (D-166, D-170), and its pad 848015 bonded on the leg; the skin 211301 bonded to the frame with the bond set 108002, one 12 x 3 joint on every member it touches and one on its back return (D-137, bond spec section 8), laid face down on a flat table with the ACP face as datum; the fill pieces friction-fitted in their bays: bay 1 F01, bays 2 and 5 F02, bays 3 and 4 F03 (bay 4's turned over left to right), bay 6 F04; the captive bolts 838001, a washer 838004 under each head, each held by a retainer 838005 in its Ø19 access hole (J-BASE-01 or J-WALL-01 in the bottom rail, J-FRONT-01 in the front stile; HOLD-02); the gasket 848001 on the nut-side faces: the top member and the back stile's room face.
8. TOLERANCE: the overall sizes are for reference; each part's drawing holds its own tolerances. Not ISO 2768.
