GENERAL NOTES

1. UNITS: mm. Do not scale the drawing. ISO first-angle projection (ISO 5456-2), symbol in the title block. Dimensions to ISO 129-1. Sheet 1: views, sections and hole tables; sheet 2: these general notes.
2. Views: the principal view looks toward -Y (X = -X, Y = +Z (pod axes); looking toward -Y); every view's title gives its own X and Y and how they map to the pod axes (conventions section 4). On every view X runs right and Y up.
3. Origin O = the part's corner shown; O1, O2... are O seen in each view. Hole positions in the tables are from O.
4. Cut from pre-galvanized steel tube (S280GD+Z or SGC400, Z100) to the length and end cuts shown, as the frame's cut list row gives them (D-120, D-131); each mitred end cut back square to its mitre for the 2.0 mitre plate (J-FRAME-01). Welded into its frame (411101 or 411102) in the frame's jig.
5. Holes, where the tables show them: made after welding and the zinc-rich touch-up, by CNC or a drill jig that locates on the frame's joint faces and its spigot hole (J-FRAME-01); this sheet shows them on the tube for reference. Rivnuts 838003 are set after that.
6. Holes go THRU 1 WALL of the member unless the table says otherwise; deburr both sides.
7. TOLERANCES (PROPOSED until the shop confirms; not ISO 2768): cut length +0/-0.5 and end angles ±0.25° (the cut list, assumption); hole positions to the frame's datums (R-J6: Ø0.4 to A|B|C, the spigot hole and slot ±0.1); rivnut holes Ø9.53 +0.10/0 (maker); other hole sizes +0.2/0 (assumption). Not ISO 2768 on the tube.
