GENERAL NOTES

1. UNITS: mm. Do not scale the drawing. ISO first-angle projection (ISO 5456-2), symbol in the title block. Dimensions to ISO 129-1. Sheet 1: views, sections and hole tables; sheet 2: these general notes.
2. Views: the principal view looks toward -X (X = +Y, Y = +Z (pod axes); looking toward -X); every view's title gives its own X and Y and how they map to the pod axes (conventions section 4). On every view X runs right and Y up.
3. Datums (ISO 5459): A = top face (the wall seat, Z 110); B = axis of the spigot hole H07 (joints register R-J6, R-J13); C = the outer face (X -1250, flush with the ACP), which stops the turn about B. Origin O = datum B's axis on datum A; O1, O2... are O seen in each view. Hole positions in the tables are theoretically exact from O.
4. Drawn where it sits in the pod: its STEP is in its own system CS-111101, placed in the pod by v2/03-Manufacturing/base/110000_P01_BASE_STEP.step; X(part) = -Y(pod), Y(part) = +X(pod), Z(part) = +Z(pod) (checked hole for hole against that assembly).
5. Front end: mitre to the DL decor block's outer facet band piece, 24.14° from square, long point on the outer face; back end square (BASE tube cut list).
6. Holes go THRU 1 WALL of the member unless the table says otherwise; deburr both sides. Coaxial holes in two walls of one member are shown in section D-D.
7. TOLERANCES (PROPOSED until the shop confirms; not ISO 2768): hole positions Ø0.4 to A|B|C (joints register R-J6; stack ST-03 leaves 0.05 mm); the back spigot rivnut hole ±0.1 from B along the band (joints register 2.11); rivnut holes Ø9.53 +0.10/0 (maker); other hole sizes +0.2/0 (assumption); cut length +0/-0.5, end angle ±0.25° (BASE cut list, assumption). Not ISO 2768 on the anodised faces.
