GENERAL NOTES

1. UNITS: mm. Do not scale the drawing. ISO first-angle projection (ISO 5456-2), symbol in the title block. Dimensions to ISO 129-1. Sheet 1: views, sections and hole tables; sheet 2: these general notes.
2. Views: the principal view looks toward +Y (X = +X, Y = +Z (pod axes); looking toward +Y); every view's title gives its own X and Y and how they map to the pod axes (conventions section 4). On every view X runs right and Y up.
3. Datums (ISO 5459): A = top face (the wall seat, Z 110); B = axis of the spigot hole H04 (joints register R-J6, R-J13); C = the outer face (Y 850, flush with the ACP), which stops the turn about B. Origin O = datum B's axis on datum A; O1, O2... are O seen in each view. Hole positions in the tables are theoretically exact from O.
4. Both ends square, each closed by a 1.5 end plate welded in flush, 2420 over both plates (D-129). Each plate has one slot open at its bottom edge on the band's centre line, 12 wide at the edge and narrowing to 6.5 over its bottom 6, then 6.5 up to its round end, for the side band's 2 key studs as the band is lowered onto them; the bottom wall has a 12 x 9 notch at each end for the stud heads, and its end edge a 1 x 45° bevel either side of the notch (joints register J-BASE-02, FR-15).
5. Holes go THRU 1 WALL of the member unless the table says otherwise; deburr both sides. Coaxial holes in two walls of one member are shown in section D-D.
6. TOLERANCES (PROPOSED until the shop confirms; not ISO 2768): hole positions Ø0.4 to A|B|C (joints register R-J6); the other spigot rivnut holes ±0.1 from B along the band (joints register 2.11: ST-02, ST-04); rivnut holes Ø10.00 +0.10/0 and the glide's rivnut holes Ø13.50 +0.15/0 (D-163); the end plate slots 6.5 +0.1/0 wide, ±0.2 on the band's centre line (they set the corner across the band, FR-15; assumption); other hole sizes +0.2/0 (assumption); cut length +0/-0.5, square ends, 2420 +0/-0.5 over the welded plates (BASE cut list, assumption). Not ISO 2768 on the anodised faces.
