GENERAL NOTES

1. UNITS: mm. Do not scale the drawing. ISO first-angle projection (ISO 5456-2), symbol in the title block. Dimensions to ISO 129-1. Sheet 1: views, sections and hole tables; sheet 2: these general notes.
2. Views: the principal view looks toward -Y (X = -X, Y = +Z (pod axes); looking toward -Y); every view's title gives its own X and Y and how they map to the pod axes (conventions section 4). On every view X runs right and Y up.
3. Datums (ISO 5459): A = the bottom face (Z 10, on its glides); B = the keyed end plate's outer face (X 915, on the intake piece's end, J-BASE-02); C = the outer face (Y -850, the band's front line). Origin O = the corner where A, B and C meet; O1, O2... are O seen in each view. Hole positions in the tables are theoretically exact from O.
4. Door end (X 218.5): square and open, closed by the flat end cap 118003, in view at the door opening (D-132). Keyed end (X 915): square, closed by a 1.5 end plate welded in flush, with the 2 keyholes for the intake's inline key 111215 (joints register J-BASE-02, D-144).
5. No holes in the top wall: it is in view in front of the glass, so the 2 glides are levelled by turning their base (BASE feature rationale FB-24).
6. Holes go THRU 1 WALL of the member unless the table says otherwise; deburr both sides.
7. TOLERANCES (PROPOSED until the shop confirms; not ISO 2768): hole positions ±0.2 from B along the band and from C across it (joints register R-J6); keyhole seats ±0.2 from A (they set the band's height on the key's studs; assumption); keyhole slots 6.5 +0.1/0, entries Ø12 +0.2/0 (assumption); glide nut holes Ø13 +0.10/0 (HOLD with the nut); cut length +0/-0.5, square ends (BASE cut list, assumption). Not ISO 2768 on the anodised faces.
